

Product video for your Industry Experience project

Background:

- Your Industry Experience team will develop a short 2 to 3 minute product video to help pitch your Industry Experience (IE) project to a potential sponsor.
- The Product video will be presented to your Industry Mentors during Week 9 Friday studio. Your Industry Mentors will be awarding the “best” product video in your Week 9 Friday studio.

Objective:

- To understand how to approach and use techniques to structure a more complex communication – in this case, a proposal (or pitch) to convince a time poor executive that your IE project is a good idea.

Instructions:

- Develop a creative product video. 2 – 3 minutes maximum
- All team members should contribute towards the product video

Things to consider when planning your product video:

- Purpose: What do you want to achieve with your video?
- Audience: How will the audience (busy sponsor) influence the content, look and mood of your video?
- Key messages: What are the key messages that need to be communicated to your sponsor and how could this best be done?
- Storyboard: How will your messages flow to best effect? Plan your video with a clear start, middle and end.
- The look: Real humans, animation etc? What will best sell your message?
- Time available: How will the deadline to complete the video and length of the video influence your decisions?
- Implement best practice: Research good product videos and ads - What aspects make them good (or bad)?

What to consider:

- Purpose: Objective of your project is clear. A potential sponsor can understand what the project does, the benefits and who it is for.
- Content: The problem, target users, the solution, key features and main benefits are communicated in a logical flow.
- Audience: Pitched appropriately to a time poor executive. 2-3 minutes. Content (messages) are relevant and to the point.
- Technical: Video effects and audio are creative and engaging. Look and feel suits the topic and audience.

Submission

- The product video is to be submitted in your PGP and e-portfolio. submission per team.
- We will be viewing the product video in Week 9 Friday studio with your Industry Mentors.

Hints for developing your video:

- Be creative – could include photos, music, graphs, animation, visual aids. Seeing humans is good.
- Choose a software you can handle within the deadline. Don't go with something too complex.
- Research free video making applications BUT ensure any trial period runs beyond the IE expo and there are no prominent watermarks across the screen.
- Check copyright and plagiarism especially for music and photos.
- Details of what is expected for a distinction, credit etc can be found below.

Freely licensed images/music to help with your video:

Here are some resources for you to use when creating your videos (or even your projects for FIT5120):
